

AffinitySECURE

A Bespoke Proactive Security Management Service only available from MIS Corporate Defence Solutions

Service Overview:

Companies increasingly recognise that the Internet is a mission-critical component of their infrastructure. Therefore the availability and security of the Internet is no longer a luxury, but a business imperative. MIS Corporate Defence Solutions Limited (MIS CDS) is pleased to offer you our *AffinitySECURE* service **FREE OF CHARGE** as part of our continued commitment to our 500 Managed Service Community.

What is *AffinitySECURE*?

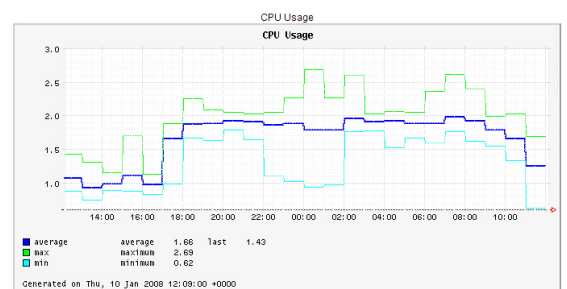

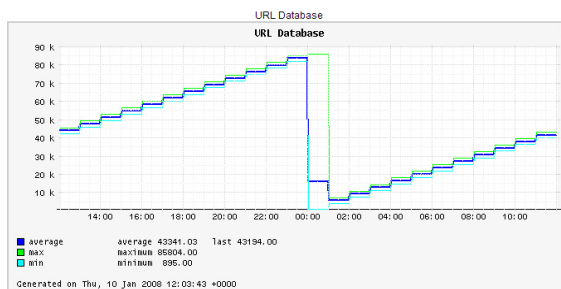

AffinitySECURE is a our third generation real-time monitoring service developed in-house over 10 years, examining critical parameters of our customers' infrastructure for a wealth of services, including firewalls, remote access solutions, web and email security solutions amongst others.

MIS CDS appreciates that whilst security solutions are vitally important they only serve to enable Internet based communication, which is why we are pleased to offer you as part of our service, *AffinitySECURE* to monitor critical services like email, web sites, e-commerce sites and other Internet facing services.

What does *AffinitySECURE* Offer you?

AffinitySECURE offers you a modular approach with granular reporting along with graphical trend analysis, that will trigger alerts and either send it to you or to our dedicated team of Support Engineers within seconds, with real-time data before a threat has an opportunity to develop into a problem. The service is fully automated, and is monitored 24 x 7 x 365. The combination of automated and human experience means that issues are recognised at their earliest stage and threats averted, more often than not before our customers are aware of any problems.

Key *AffinitySECURE* Service:

- Proactive Security Management
- Highly Customisable to meet **your** needs
- Real-Time Granular Monitoring
- Detailed Graphical Trend Analysis
- Bespoke Alerting Set Up (SMTP, SMS, paging)
- Advance Threat Warnings
- Bespoke Modular Add-On Options

Key Features and Benefits of *Affinity*SECURE

Real Time Monitoring Service	
Feature:	Offers:
Disk Space	A lack of disk space is a major cause of firewall failure and is often the result of increased connections/rejections filling up the log, indicating an attack is in progress
Virus Patterns	This validates the signature update service for critical servers, ensuring that your pattern files and anti-virus engines are up to date. This service can also be used to validate updates for URL checker databases
Environmental Checks	This service monitors the response time and availability of critical Internet based Services, such as web pages or DNS records
Uptime Checks	This service will alert against any reboots of your device(s), which can often happen overnight and without knowing, will go undetected
VIP Alerting	This service shows you if a failover has occurred, something which can go undetected and potentially cause a disaster should your second failover device also fail
Listening Ports	This service allows you to learn which ports are listening for traffic and can identify unauthorised installations of programs which could indicate Trojans and viruses
Policy Installations	This service allows alerts when any unauthorised work is performed on firewalls

Alerting Mode	A fully configurable service according to your specifications, based on thresholds. For example, clients often request to be alerted to traffic thresholds as unusual levels of traffic as unusual levels can indicate an attack or a fault virtually ANY measurable aspect can be put on Alert via <i>Affinity</i> SECURE
---------------	--

Automated Vulnerability Assessment	The Automated Vulnerability Assessment Service within <i>Affinity</i> SECURE uses current best of breed scanning tools to probe and examine a client's network upon request. This can be scheduled as requested, and generates downloadable, easily digestible pdf or html reports. This will allow you to modify service settings according to the results and is often used to verify the work of third party organisations, or to ensure that a company's external security profile remains consistently high
------------------------------------	--

Backup to Secure Site	Key to disaster recovery or contingency planning, MIS CDS will backup your system configurations to the MIS CDS centre. This includes rules, system configurations, and security settings, to enable rapid restore to normal activity
-----------------------	---

Unique Security Management	<i>Affinity</i> SECURE has been developed by MIS CDS experts and is not available from any other Service Provider and is the only service to offer a true proactive service of its kind in the market place today. The IT Community is familiar with Network Management tools such as Tivoli and HP OpenView. It is important not to confuse the MIS CDS <i>Affinity</i> SECURE Service with these tools, but understand that most of our successful deployments have been in conjunction with these tools offering security specific monitoring for integration into enterprise management tools
----------------------------	---
